

# Pollution

How does burning coal, oil and gas cause pollution?

Renewable Robbie finds out more about burning coal, oil and gas. He noticed a lot of smoke coming out from the chimneys at the Power Station.

Power Stations are much cleaner than they used to be but burning coal, oil and gas causes **pollution**. This means that it makes the air dirty. Factories, houses, aeroplanes, ships, cars, trucks and buses all burn coal, oil or gas.

Pollution can make people sick. Do you know anyone who has asthma? This often comes from pollution. It can also kill plants and animals.

**Join Renewable Robbie for some activities on pollution!**
