

What is energy?

Renewable Robbie hopes you will join him on an adventure to learn all about energy!

Energy is used to give us electricity and heat we need for our homes, schools, hospitals and other buildings. The electricity you have used today didn't just magically appear in the sockets. It has to be made and then delivered to us to use. Renewable Robbie uses electricity to watch TV, play the play station, cook his dinner and listen to CD's.

Renewable Robbie wants to learn all about energy. Energy comes from lots of different places. It comes from coal, from oil, from gas, from the sun, from water, from the ground and even from plants and animals. Without energy, there would be no life, no movement, no light ... there would be nothing!

Join Renewable Robbie for your first chance to do some Activities about energy!
